WORLD PRODUCTS INTRODUCES VORTEC-STYLE CYLINDER HEAD

World Products, the originator of popularly-priced high performance cylinder heads for street/strip applications, announces its latest offering for the venerable small block Chevrolet engine; a highly refined Vortec-style aluminum head. This addition to World’s Motown line features a 23-degree valve angle and is compatible with all standard Chevrolet valve train components.

With Vortec-style “quick burn” 64cc combustion chambers and 215cc intake runners, this head is ideally suited to a wide range of engine combinations. Add in generous 2.080” diameter intake valves and 1.600” exhaust valves, the Motown 23-degree 215 clearly provides an excellent balance of flow and velocity. Also featuring RightCast® port technology, this head will provide outstanding out-of-the-box performance increases and is an excellent choice for the serious street enthusiast.

Other important technical features include a valve stud angle of 23 degrees (same as the valve center line) to ensure optimum valve train geometry, fully machined valve cover rails with perimeter style attachment for leak-free sealing, and universal end pads to accommodate both early and late model accessories.

Manufactured from premium grade 355-T6 aluminum alloy, World’s Motown 23-degree Vortec-style heads are offered bare or in complete assemblies –which include genuine Manley stainless steel valves and ARP hardware. They are offered with several spring packages to accommodate camshafts with lifts to .700”.

For additional information visit World’s website (www.WorldCastings.com) or call 631-981-1918. A complete full-line catalog is available upon request by phone, e-mail, or by writing to World Products, 51 Trade Zone Court, Dept. ____, Ronkonkoma, NY 11779.
